

R*STARS REVERSE CODE FIELD

MAIN FACS has implemented a software modification which will prevent the use of incorrect values in the reverse code field (RVS). The only values that will now be accepted in this field are 'R' or 'Space'.

The R*STARS Data Entry Guide, Chapter 3, On Line Procedures, indicates that a value of 'R', 'M' or 'Y' can be used in the reverse code field (RVS) on transaction entry screens. The manual will be changed to indicate that valid values are only 'R' or 'Space'.
